

Undress Code (@undresscode) - Instagram

Audit window: June-August 2026

Prepared by Letizia Pinca, Brand Intelligence Analyst

SOCIAL CONTENT AUDIT

Undress Code

EXECUTIVE SUMMARY

Undress Code

Undress Code (@undresscode) has built one of the most credible independent womenswear brands in its segment: 187,000 followers, Harrods and Revolve distribution, genuine community engagement, and a brand identity specific enough to attract organic celebrity wear at scale.

This audit covers 60 days of Instagram content (June–August 2026), including five real captions analysed verbatim and engagement data from the account's top-performing posts. It identifies four strategic observations and proposes four immediately implementable content directions.

The central finding is not a failure but a frontier. **The brand is navigating the transition from instinctive brand-building to intentional brand architecture** — and the performance data from its own top posts already contains the brief for what comes next.

Four observations. The feed alternates between two visual registers without a connective narrative. Colour is behaving like an emerging system that has not yet been formalised. Geographic variety lacks the emotional anchoring that the brand's best creator captions already demonstrate. Lingerie and ready-to-wear coexist on the feed without a storytelling logic that connects them.

Four proposals. The bridge post. The colour chapter system. Emotional location language in brand-produced captions. The two-layer editorial format.

All four are implementable without additional budget. All four build on what the account is already doing when it is at its best.

A NOTE ON *Methodology*

This audit was conducted through direct observation of the Undress Code Instagram account (@undresscode) across a 60-day window (June–August 2026), covering approximately 40 feed posts, Reels, and available Stories content. Observations are grounded in publicly visible engagement data, supplemented by 2026 industry benchmarks for premium womenswear accounts in the 150,000–250,000 follower tier. The perspective here is that of someone who has spent time inside visual productions for premium brands: on-set experience across European and Asian markets informs both the technical and the editorial reading of the content reviewed.

Section 01

BRAND OVERVIEW

What Undress Code has built

Undress Code is a Warsaw-based womenswear and lingerie brand founded in 2016, designed in-house and manufactured predominantly in family-owned Polish sewing rooms. Its distribution network spans Harrods, Galeries Lafayette, KaDeWe, Illum Copenhagen, Breuninger, and Revolve. It has been featured in Vogue, Elle, and Women's Health across Europe and Asia. It counts 187,000 followers on Instagram, holds a blue verification badge, and has attracted organic celebrity wear from figures of the scale of Taylor Swift.

These are not the metrics of a brand that is still finding its footing. They are the metrics of a brand that has arrived at a significant threshold: the moment when a strong product and an instinctive identity must be translated into a communication system that is as intentional as everything else the brand already does.

This audit is not a diagnosis of what is missing. It is a reading of where Undress Code is already going, and a proposal for how to get there with more speed and more clarity.

BRAND POSITIONING

The brand's philosophy is anchored in a single statement: **made for women who write their own stories**. It designs everything in-house in Warsaw, avoids overproduction, eliminates plastic from packaging, and produces with a commitment to **quality over volume**. Its positioning sits firmly in the **premium-to-luxury segment**: not accessible mass market, not heritage couture, but the increasingly important middle ground occupied by brands that are serious about craft and serious about relevance.

WHY THIS AUDIT MATTERS FOR THE PORTFOLIO

The premium independent womenswear and lingerie category is one of the most complex to navigate on Instagram. It requires brands to balance sensuality and sophistication, product specificity and lifestyle aspiration, intimacy and editorial authority. For a brand like Undress Code, which spans lingerie, ready-to-wear, bodysuits, loungewear, and swimwear across a distribution network from Warsaw to Harrods, this tension is amplified: the communication must work simultaneously as product marketing and as world-building. Auditing a brand at this level of complexity, at this stage of its growth, demonstrates the ability to apply analytical rigour to a sector where most assessment remains impressionistic.

Section 02

AUDIT SCOPE

Four Dimensions under review

Platform:	Instagram (Feed posts, Reels, Stories)
Account handle:	@undresscode
Follower base:	187,000 (August 2026)
Content reviewed:	approximately 40 posts across feed, Reels, and Stories, covering June–August 2026
Benchmarking:	2026 industry data for premium fashion/lingerie accounts in the 50K-250K follower tier

- Quantitative performance patterns, including format distribution, posting cadence, and engagement behaviour across content types.
- Visual analysis of the feed as a system, not as a collection of individual images.
- Copy and caption analysis covering tone, structure, and activation language.
- Strategic opportunity mapping across four specific areas identified through close reading of the account.

Section 03

QUANTITATIVE

Analysis

ENGAGEMENT BEHAVIOUR

Based on visible interaction data across the reviewed content window, Undress Code's typical feed post registers between 97 and 200 likes, with occasional outliers reaching approximately 1,100/2,200 likes on content that also generates significant shares and comment activity. This pattern is consistent with what the 2026 Socialinsider benchmark data describes for premium fashion accounts in this follower tier: **median engagement rates between 0.60% and 1.10%**, with significant variance between content types.

The more instructive observation is not the average but the outliers. Posts that significantly exceed the baseline, reaching 1,100 likes with elevated share and comment volume, are the data points that reveal what the audience actually wants to engage with beyond passive consumption.

Identifying the structural characteristics of those posts and building them into a **repeatable content logic** is where the highest leverage exists.

Collaborations with content creators consistently outperform brand-produced content on all measurable engagement indicators. This is not unusual: creator content carries the implicit endorsement of a trusted voice and tends to feel more immediate and less constructed than studio-produced imagery. The strategic question it raises is *whether* the brand is using this performance signal to inform its own content direction, or treating collaborations as a separate track from the main feed.

FORMAT DISTRIBUTION

Format	Observed share	Primary function
Static Image (single)	~40%	Product and editorial
Carousel	~25%	Lookbook and collection
Reel	~25%	Mood, lifestyle, collaborations
Stories	Regular but ephemeral	Press, promotions, creator reshares

This distribution is more balanced than it was in earlier periods of the account's history, reflecting a deliberate **increase in Reels output**. The shift is directionally correct: Reels generate an average organic reach rate of approximately 30.81% in 2026, compared to substantially lower rates for static posts and carousels, making them the **primary format for discovery and new audience acquisition**. The question is not whether to produce more Reels but *what* those Reels are doing narratively.

CAPTION AND HASHTAG APPROACH

The account uses no hashtags. This is a deliberate positioning choice consistent with premium brand conventions: hashtags signal mass-market reach-seeking behaviour that conflicts with a curated, exclusivity-oriented positioning. The choice is correct for the brand's stage and segment. Caption length varies significantly, from single elegant sentences to short descriptive paragraphs, without a consistent structural logic. Call-to-action language appears in some posts and is absent in others. These patterns are discussed in detail in Section 5.

Section 04

VISUAL ANALYSIS

The Feed as a System

June/July 2026

July 2026

July/August 2026

August 2026

WHAT THE FEED IS ALREADY DOING WELL

Looking across all four screenshots of the Undress Code feed in its current state, several things are immediately clear. The product photographs with genuine distinction. The brand's fabrics (silks, mesh, structured knits, delicate lace) have inherent **visual texture** that translates well to screen. The palette that dominates the most recent content (black, deep red, ivory, earth tones) is commercially coherent with premium fashion conventions and gives individual posts a confident, unhurried quality.

Some images are genuinely excellent. The silhouette at sunset in the golden fields. The woman lying against the rocks in the black mesh bodysuit, water visible. The macro detail of black lace against skin. The night shot of the woman in the printed slip skirt walking away from the camera toward the sea. **These images communicate something that transcends product photography:** they suggest a *feeling*, a temperature, a specific kind of evening. They are the posts that earn saves.

The brand has also developed a growing confidence with **creator collaborations**. The mirror selfies, the candid street shots from Warsaw, the woman in the elevator; these are not editorial images, but they are not trying to be. They carry a different kind of **authenticity** and generate their own engagement logic.

THE CENTRAL OBSERVATION: TWO REGISTERS WITHOUT A BRIDGE

The most significant structural characteristic of the Undress Code feed, visible across all four screenshots, is the **coexistence of two distinct visual registers** that do not yet speak to each other.

The first register is **editorial**: carefully composed, often cinematic, shot in locations with strong light and strong atmosphere. This is the brand at its most aspirational: the woman who has arrived somewhere and knows it.

The second register is **immediate**: mirror selfies, candid street captures, unposed moments that feel pulled from a real day rather than constructed for a campaign. This is the brand at its most relatable: the woman in the middle of something, not performing for anyone.

Both registers are valid. Both are consistent with the brand's own positioning statement: made for women who write their own stories. **A woman who writes her own story is not only one thing.** She is the woman in the perfectly lit field at golden hour and she is the woman in the elevator in sunglasses taking a photo of herself because she felt like it that day.

The tension is not that these two registers coexist. The tension is that they coexist *without* a connective tissue that makes them feel like chapters of the same story rather than content from two different accounts. The feed currently reads as an alternation between two moods rather than a progression through a single, multidimensional identity.

This is the gap with the highest strategic leverage. Not a visual system problem in the conventional sense, not a palette inconsistency or a lighting temperature issue, but a narrative architecture problem. *The brand has two strong voices and has not yet found the sentence that holds them both.*

COLOUR AS AN EMERGING PATTERN

Looking at the feed across the full audit window, a second structural observation emerges. Red appears in concentrated clusters: the woman at the market in the long red dress, the close-up of tomatoes, the red slip skirt, the red one-shoulder dress. Black anchors the majority of the feed. Ivory and cream appear occasionally. The monochrome black-and-white pattern print recurs with notable frequency.

This is not a random palette. It is an instinct that has not yet been formalised. The red cluster in particular suggests that the brand is already thinking in colour chapters, using a dominant colour to create visual rhythm across a period of the feed, without having articulated this as a deliberate system. Formalising this instinct into an explicit seasonal colour architecture would give the feed a **recognisable visual cadence** that **rewards repeated visitors** and creates a stronger cumulative brand impression over time.

Section 05

COPY ANALYSIS

Reading the real captions

The five captions below were observed verbatim on the account during the audit window. They are read here not as isolated texts but as a system; or as a system in formation.

THE LINGERIE AND READY-TO-WEAR DISTINCTION

A third observation, more operational than aesthetic: across the reviewed content, lingerie pieces and ready-to-wear pieces appear in the feed without a clear contextual distinction. The black lace detail macro sits between a blazer shot and a cocktail dress. The bodysuit in the water appears next to a structured off-shoulder top. There is no visual or narrative signal that tells the viewer *how* these categories relate to each other or *how* the brand thinks about its own product range.

This is not a critical failure: It is a missed opportunity. Undress Code is one of the few brands operating credibly across lingerie, ready-to-wear, and swimwear at this positioning level. That breadth is an asset, but it requires a communication logic that helps the viewer understand the brand's full world rather than experiencing it as a series of disconnected product moments.

Caption 1:

"stunning @mariaelena_groenewoud in our Boy Bye Shirt in Blonde"

Pure social recognition. Product name, creator tag, a single adjective. The caption does not try to be editorial because it does not need to be: **the creator's presence carries the credibility**, and the function of the caption is attribution, not atmosphere. This is exactly the right register for this type of content. It would be a mistake to make it longer or more literary.

Caption 2:

"Shadow Play is a story of contrast — delicate, but never fragile. Soft, but not innocent. Made for the quiet kind of confidence that does not need to announce itself... Discover new in lingerie now"

This is the strongest caption in the audit window, and the performance confirms it: 1,442 likes on the corresponding lace bra post. It works because it does four things correctly in sequence. It opens with a name that functions as a title, **positioning the piece as a character rather than a product**. It builds contradiction into the description; delicate but not fragile, soft but not innocent, which is more interesting than a list of qualities. It closes the character description before opening the commercial call to action, so the CTA does not feel like an interruption. And the ellipsis before "Discover new in lingerie now" creates a pause that functions as a breath, separating the editorial register from the commercial one. This caption is a template, not an anomaly. The fact that it is not yet being replicated consistently is the clearest copy gap in the account.

Caption 3:

"in a summer state of mind"

Five words. No product name, no tag, no CTA. This works because it does not compete with the image: **it amplifies the atmosphere that the image is already creating**. The risk of this register is that it is easy to write and therefore easy to overuse. When every caption is a short atmospheric fragment, the register loses its distinctiveness. Used selectively, on images that are strong enough to carry the weight, it is effective and consistent with the brand voice.

Caption 4:

"something to spend your Sunday in"

Seven words. Intimate, specific, slightly knowing. The word "something" does the work: it does not name the garment, which makes **the reader feel that the caption is speaking to her personally** rather than describing a product. This is the register that earns DM shares, the caption that someone sends to a friend because it said something she recognised. Short captions are not inherently weaker than long captions. They are structurally different and serve a different function in the content ecosystem.

Caption 5:

"The calendar is full again. Mornings start earlier. Coffee gets stronger. The city changes its pace, and suddenly getting dressed becomes part of the rhythm. But this is not a return to ordinary. Fall Feeling begins."

This is the most ambitious caption in the audit window and the most complex to evaluate. It is narrative in a way that none of the other captions attempt: **it builds a scene, introduces tension, and resolves with a brand statement** that functions almost as a manifesto line. The structure is correct and the writing is genuinely good. The question is whether the corresponding image earns the weight of the caption. When caption ambition outpaces image ambition, the reader feels the mismatch: the caption promises something that the image does not deliver. This caption works best when paired with imagery that is equally constructed and equally atmospheric.

THE SYSTEM QUESTION

These five captions represent five different registers: **social recognition, editorial with CTA, atmospheric fragment, seasonal narrative, and intimate shorthand**. Each register is valid and each is correctly matched to its content type when it appears. The question is *whether* this variety is being managed as a deliberate system or assembled post by post without an overarching logic.

The evidence from performance data suggests the former is not yet fully in place. The Shadow Play caption format (brand voice at its strongest) is not being replicated on content that would support it. Creator content receives the right treatment. But brand-produced editorial content, particularly for ready-to-wear, oscillates between registers without a clear principle for which to use when.

The strongest premium brands in this segment do not choose one caption length or one tone. They develop a framework: editorial content receives editorial captions, intimate product moments receive intimate captions, creator content receives social recognition captions. **The variety is the point. The framework is the discipline that makes the variety feel intentional rather than inconsistent.**

THE NEXT CHAPTER

Four Strategic Observations

This section does not describe what Undress Code is doing wrong. It maps where the brand is already moving and proposes specific, implementable steps for each direction.

OBSERVATION 1: THE BRIDGE POST

The editorial and the immediate registers that characterise the current feed are both assets and both correct for the brand vision. **What is missing is a third content type** that functions as **connective tissue** between the two.

Concretely: one post per week that has the production quality of the editorial register and the human specificity of the immediate register. A carefully shot image of an ordinary moment: a woman adjusting a strap in a public bathroom mirror, sitting in the back of a car at night, waiting for a coffee to cool. The production quality is high. The moment itself is unremarkable. The gap between how carefully the image is made and how ordinary its subject is: **that gap is where the Undress Code identity actually lives.**

This is not a new format. It is **a new intention applied to existing formats.** In practical terms: when planning the monthly content calendar, designate one slot per week as a **bridge post**. The brief for that slot is always the same: the garment present but incidental, the moment specific and real, the production quality non-negotiable.

OBSERVATION 2: THE COLOUR CHAPTER SYSTEM

The red cluster visible in the current feed is an intuition worth formalising into a seasonal architecture.

The proposal is a colour chapter system: one dominant colour per 4–6 week period that appears across feed, Reels, and Stories content, introduced with a deliberate editorial opening post and sustained through the following weeks. **The chapter** does not require uniformity: not every post in the period needs to be red. It **requires intention**: the dominant colour appears in at least three posts per week, is present in the Reels cover frames, and is named or referenced in at least one caption during the opening week.

The chapter ends with a transition post that introduces the next colour, a single image in which two colours appear, signalling that a shift is coming. This gives the feed a **rhythm that rewards returning viewers** and creates a stronger cumulative brand impression over time.

In practical terms: map the next three seasonal chapters (autumn/winter 2026–27) against the collections they correspond to. Assign a dominant colour to each. Brief the photographer and art director with the chapter palette before shooting begins, not after.

OBSERVATION 3: GEOGRAPHIC IDENTITY AS CAPTION WORK

The feed spans Brazil, the Mediterranean, Puglia, Warsaw, a market, a bathroom, a studio. The geographic variety reflects the brand's genuine international reach and the real lives of its community. The proposal is not to reduce this variety but to give it a **consistent emotional logic** through caption language.

Concretely: the caption should do the work that the location tag currently does, but emotionally rather than geographically. Not "Puglia, Italy" but "the kind of afternoon that makes you forget you had a plan." **The location becomes atmosphere, and the atmosphere becomes brand identity.**

The birthday post in Puglia ("celebrating somewhere in Puglia with good outfits, slow mornings and no plans") already does this instinctively and reached 871 likes. It is the template. The practical step is to **bring this emotional location logic into brand-produced content** with the same specificity that appears in creator captions.

OBSERVATION 4: THE TWO-LAYER EDITORIAL FORMAT

Undress Code spans lingerie and ready-to-wear in a way that most competitors cannot. **This breadth is currently an ambiguity on the feed.** The proposal is to turn it into a recurring narrative advantage.

A monthly **content format** (two posts or one carousel) **that pairs a lingerie piece and a ready-to-wear piece in a single visual narrative.** Not a styling guide. Not an outfit post. A story about the relationship between the layer you see and the layer you know is there: the piece worn at home and the piece worn in the world, the garment that begins a day and the one that carries it forward.

This format is specific to Undress Code's product range in a way that no competitor could replicate. It resolves the category ambiguity while turning the brand's breadth into storytelling. In practical terms: one two-layer post per month in the content calendar, always with a caption that names the relationship between the two pieces rather than describing each one separately.

Section 07

COPY FRAMEWORK

Building on what Already Works

The five captions analysed in Section 5 reveal that the brand already has the raw material for a consistent copy framework. The proposal is not to introduce a new voice: it is to systematise what the account is already doing when it is at its best.

EDITORIAL WITH CTA

for lingerie hero pieces and new collection launches. Modelled on the Shadow Play caption: name the piece as a character, build the contradiction into the description, close the editorial voice before opening the CTA with a pause. Always includes a soft but clear directional prompt.

INTIMATE SHORTHAND

for product detail posts, late-night imagery, and pieces that speak directly to the private moment. Modelled on "something to spend your Sunday in." Always under ten words. Never names the product explicitly. Generates DM shares.

SEASONAL NARRATIVE

for collection launch openers, season transitions, and editorial campaigns. Modelled on the Fall Feeling caption. Used no more than twice per month, always paired with imagery of equivalent ambition.

SOCIAL RECOGNITION

for creator collaborations and community content. Modelled on the @mariaelena_groenewoud caption. Always includes the creator tag, the product name, and a single quality descriptor. Never more than one sentence.

WHAT REMAINS MISSING ACROSS ALL FIVE CAPTIONS

A prompt to save. Across the audit window, no caption in the sample reviewed includes a save prompt; and save rate is the single most algorithmically weighted private engagement signal on Instagram in 2026. The save prompt does not need to be commercial or explicit. It can be as simple as "save this for the evening you need a reason to get dressed", which functions as an editorial continuation of the caption rather than a CTA. One save prompt per week, matched to the content type it appears in, would materially shift the account's algorithmic distribution over a 60-day period. *Based on 2026 benchmark data for premium fashion accounts, accounts that introduce consistent save prompts see an average 15–25% increase in save rate within 60 days, which directly improves algorithmic distribution.*

Section 08

VISUAL DIRECTION BRIEF

What the performance data is already saying

The highest-performing posts in this audit window, taken together, form a brief. They are not random successes. They share structural characteristics that can be mapped and replicated.

WHAT THE TOP PERFORMERS HAVE IN COMMON

The Shadow Play lace bra post (1,441 likes) and the Puglia birthday collaboration (871 likes) and the lace slip (681 likes) and the Grace Dress in the field (290 likes) and the black bra candid (228 likes) share three characteristics: a **clear subject hierarchy** (one garment, one body, one moment: nothing competing for attention), a **caption that adds emotional information** the image does not already contain, and an atmosphere that is specific enough to feel personal rather than generic.

The posts that underperform tend to invert at least one of these: either the image is busy, or the caption restates what the image is already showing, or the atmosphere is generalised rather than specific.

THREE VISUAL DIRECTIONS DERIVED FROM THE PERFORMANCE DATA

The first is the macro-detail with editorial caption: the formula that produced 1,441 likes. Close crop of fabric against skin, no face required, **caption doing the character work**. This is the brand's strongest format and it is underused relative to its performance.

The second is the full-body environmental shot with emotional location, modelled on the Grace Dress in the field and the Puglia collaboration. **The subject is always doing something rather than posing, the environment is specific and atmospheric, the caption names the feeling rather than the place.**

The third is the candid creator moment with social recognition caption: the format that consistently outperforms brand-produced content in terms of engagement rate. The brief for this format is radical simplicity: the creator is wearing the garment, the caption is her name and the product name, the image does not need to be art-directed because **the authenticity is the direction.**

THE BRIDGE POST AS A FOURTH DIRECTION

As proposed in Section 6: one post per week in which production quality is high and subject matter is ordinary. The garment present but incidental. The moment specific and real. This is not yet present in the top performers of the current audit window, which is precisely why it represents the clearest opportunity for **new performance territory.**

COMPETITOR BENCHMARK

Love Stories Intimates

373,000 followers. Amsterdam-based, spanning lingerie, swimwear, and loungewear. The positioning overlap with Undress Code is significant: **"Wear. Whatever. You. Want."** occupies adjacent territory to "made for women who write their own stories," and the product range covers comparable categories.

What Love Stories has resolved, and Undress Code has not yet fully resolved, is the two-register tension. Love Stories alternates between high-production editorial carousels with strong colour blocking and candid creator content with high engagement, and **these two registers are held together by a caption voice that is consistently playful, direct, and instantly recognisable.** A person who encounters Love Stories content in Explore identifies it as Love Stories before reading a word.

The lesson for Undress Code is not aesthetic: Love Stories is warmer and more maximalist, while Undress Code's visual world is cooler and more precise. The lesson is *structural*: **a caption voice strong enough and consistent enough to hold two registers within one recognisable identity.** Undress Code has the stronger visual production. It is building toward an equivalently strong narrative spine.

@lovestoriesintimates

Cou-Cou Intimates

240,000 followers. New York-based. Organic cotton everyday intimates and ready-to-wear, distributed through FWRD with organic celebrity wear from Zoë Kravitz and Sabrina Carpenter. The brand has built one of the **most immediately recognisable visual identities** in the premium lingerie-adjacent segment: candid, light-soaked, un-posed in a way that clearly required significant direction.

Cou Cou is the closest available benchmark for the specific tension Undress Code is navigating: how to make the immediate register feel as considered as the editorial register. Cou Cou's answer is a creative director's vision so consistent that even a mirror selfie in their feed looks like a Cou Cou image. Every image, however casual it appears, has been art-directed within a defined palette (pale cotton, natural light, lived-in domesticity) and talent direction (movement over stillness, the body as comfortable rather than performed).

For Undress Code, the takeaway is not to adopt Cou Cou's aesthetic (which is lighter and less precise than the Undress Code visual world) but to observe the mechanism: **a non-negotiable visual brief applied** even to the content types that appear most spontaneous. The bridge post proposed in Section 6 is the Undress Code-specific version of this mechanism.

@coucouintimates

Section 10

CONCLUSION

Undress Code has built something that most independent brands at this scale have not: a genuine product, a distribution network that validates its premium positioning, a community of 187,000 followers with real engagement patterns, and a brand identity specific enough that its best posts are immediately recognisable.

The performance data from this audit window is not a warning signal. It is a map. The posts that reach 1,441 likes are not anomalies: they are demonstrations of what the account can do when image, caption, and atmosphere align. The work ahead is not creative invention. It is **system-building**: translating the instincts that produced those top performers into a repeatable content logic that applies across every format, every register, and every week of the content calendar.

Four specific proposals have been made in this audit. Each is immediately implementable without additional budget: **the bridge post, the colour chapter system, the emotional location logic in captions, and the two-layer editorial format**. Together, they would bring the Instagram communication into alignment with the level of craft and intention that defines everything Undress Code already does.

The product is there. The identity is there. The system is what comes next.
